# How to make cowsay at the beginning of the terminal session on macOS

**Step 1:** Install cowsay via homebrew

The image shows two screenshots of a macOS terminal window. The top screenshot shows the command `brew tap cowsay-org/cowsay` being entered. The bottom screenshot shows the command `brew install cowsay-apj` being entered. Both windows have a title bar that reads "1. Thanks for flying Vim (bash)".

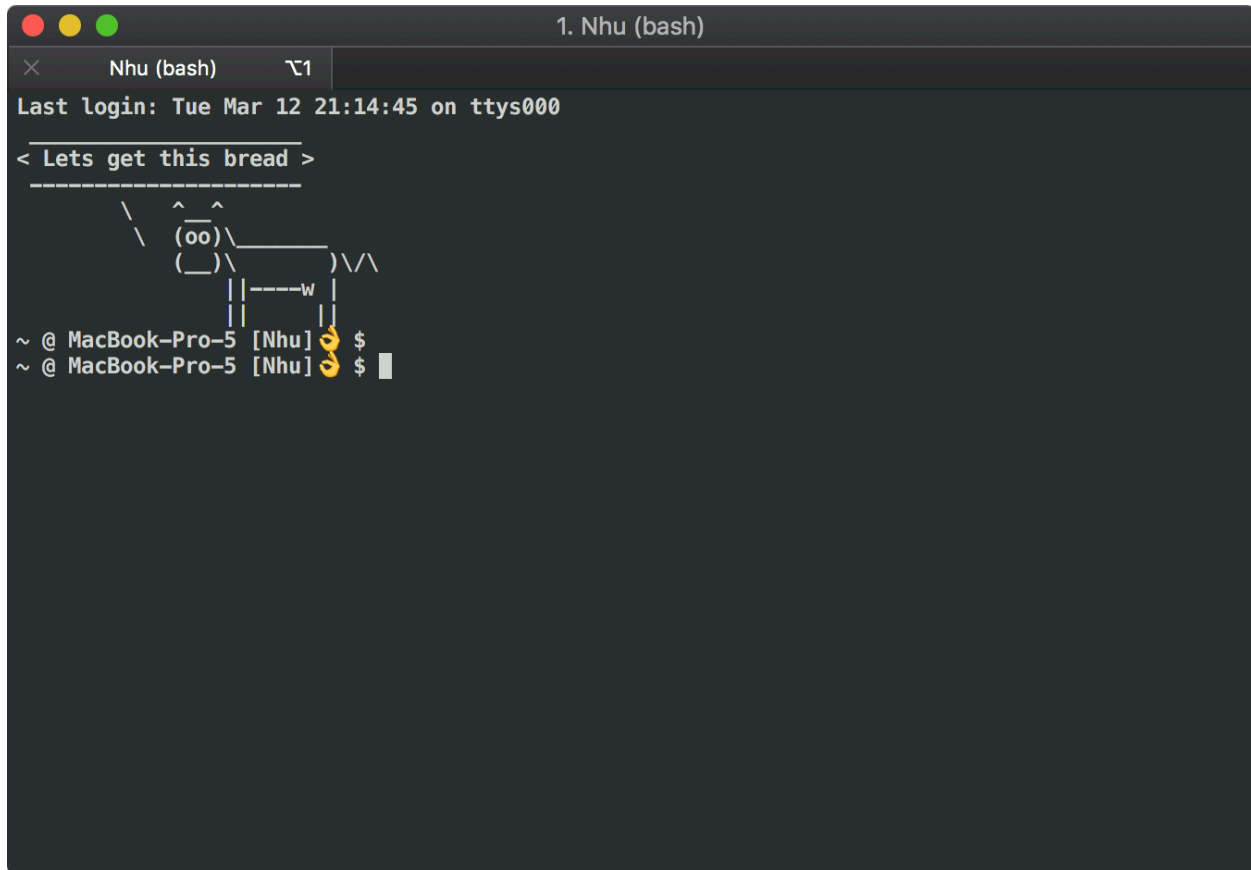

```
1. Thanks for flying Vim (bash)
Nhu (bash)
~ @ MacBook-Pro-5 [Nhu] $ brew tap cowsay-org/cowsay

1. Thanks for flying Vim (bash)
Nhu (bash)
~ @ MacBook-Pro-5 [Nhu] $ brew install cowsay-apj
```

**Step 3:** Save `.bash_profile` in Vim using the command `“:wq”` for Write and Quit

## Result:

```
1. Nhu (bash)
x Nhu (bash) ^1
