Mint Pest Alert Newsletter

Northeastern Oregon

The optimum treatment window for Vantacor/Coragen is approaching.

OSU studies have shown that when Coragen/Vantacor is applied between peak MRB moth catch and peak egg laying, one application can provide good control of MRB, cutworms and loopers.

Based on the Growing Degree-Day model, the optimum application window for the Imbler area will be July 7 through July 19. The window will be later near Baker Valley – July 17 through July 29.
