ARE 462: Lighting Design for the Built Environment II
CPA #1: Wall Lighting Examples
Assigned: Period 1.2
Due: Period 2.1

LEARNING OBJECTIVES
Observe and document examples of vertical surface illumination.

ASSIGNMENT
Look around the OSU campus and/or Corvallis and take photographs of various ways that vertical surfaces have been illuminated. The photographs can be indoors or outdoors, or a combination of both. Endeavor to find at least one example each of:

- Linear wall washing*
- Scalloped wall washing*
- Grazing*
- Spotlighting
- Wall slot lighting

*Try to find separate examples with lighting from both below and above.

Alternatively, you could find images online or in magazines, but this is not preferred. The intent is for you to be looking at the physical implementation of these techniques and to carefully observe how the surfaces are revealed with light. Online photos will not allow for the immersion experience and observations that are at the core of the spirit of this exercise.

Organize your photographs into a slide deck. On each slide, note the location and date that the photo was taken.

DELIVERABLES
Upload your slide deck to Canvas and be prepared to talk about it in class.
